Points to be noted when evacuating

Before leaving your house	Close the main gas valve, turn off the circuit breaker, and lock up.
As a general rule, evacuate on foot	Cars may stop when driven in floodwater and become obstacles for flood fighting and rescue works.
Wear sneakers	Rubber boots may become harder to walk in when water gets in and could be more dangerous.
Evacuate in pairs or more	Secure each other together with a rope when evacuating over flooded roads.
Walkable water level is that which is "below your knees"	If the water level is higher than that, wait for rescue on higher ground.
